

Going Green with Recycling and Reusing

Our greatest challenge isn't so much to teach children about the natural world, but to find ways to nurture and sustain the instinctive connections they already carry.- Terry Krautwurst

Delhi Public School, Bopal has been taking best initiatives towards creating responsible citizens by creating an impact on young minds through Green Practices. A display of creative works of the students were made through an exhibition, 'Eco-friendly Creations' on 17 December 2016, Saturday.

Students as conservators exhibited their sense of sustainable practices by displaying different articles made from recycled paper like envelopes, folders, vases, artefacts made from waste materials, wall-hangings and much more. Students and staff joined hands by putting their handprints and promising to continue this task of conservation and taking it forward to their homes and community at large

It was the young creative mind that gave inspiration and extraordinary idea to all, of using unwanted material in a useful way. Be it the thermocol used inside a TV packing or a used CD, each and every thing can have reuse value in this world - either as a useful raw material or as a decorative item for your house.

We at DPS, foster future environmental stewards.
