

SAVE BIRDS, SAVE HUMANITY

Our environment comprises everything around us and affects our life. In order to create environment awareness as well as a part of SEWA activity, bird feeder activity was conducted for students of Grade VI-VIII on 3 July 2021, wherein students made bird feeders which were hung on the trees, in their balconies to lure the birds towards them. They had their innovative ideas for the feeders and made them by using different materials like waste plastic bottles, ice cream sticks, coconut shells, etc. The activity gave a valuable lesson to be connected with nature and to follow the process of recycling the waste material. Children showed immense zeal in making a variety of bird feeders with reusable waste material and displayed their active role in promoting love and compassion towards birds.
